Trans. of Akademiya Nauk SSSR. Doklady, 1957,  
v. 112, no. 6, p. 1098-1100.

DESCRIPTORS: \*Minerals, Crystals, Hardness,  
\*Chemical bonds.

Pairs of minerals or crystals, in which the inter-atomic  
distances, valence and the coordinated numbers of  
atoms are the same show that the crystals, which have  
an essentially covalent state of bond, are harder than  
those, where there prevails an ionic bond. At the same  
time the relative difference increases with the increase  
of the valence of the composing atoms and with the de-  
crease of the inter-atomic distances.
